The Cognitive Editor

A Non-Linear Communication & Knowledge Workspace

The Context Tax of Linear Timelines

Context is repeatedly restated.

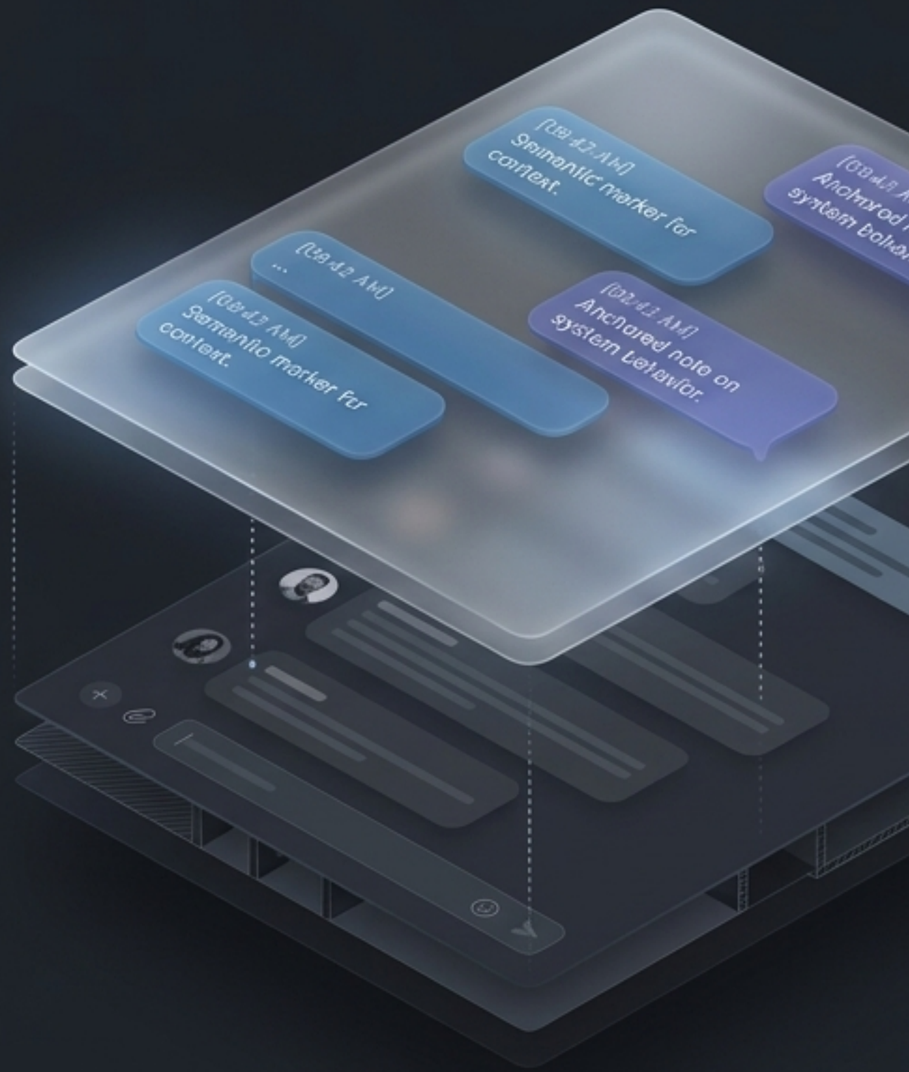

Discussions branch and tangle.

High-velocity thinkers lose cognitive momentum.

The Paradigm Shift: Forcing Interface vs. Conforming Space

	Linear Timeline	Spatial/Cognitive
Structure	Flat, chronological, bottom-heavy.	Navigable Z-axis depth, location-based.
Action	Read -> Scroll -> Remember -> Type.	See -> Point -> Speak -> Place.
Context	Ephemeral; easily lost in the scroll.	Anchored directly to the source material.
History	A log of past messages.	A living, scrubbable temporal stack.

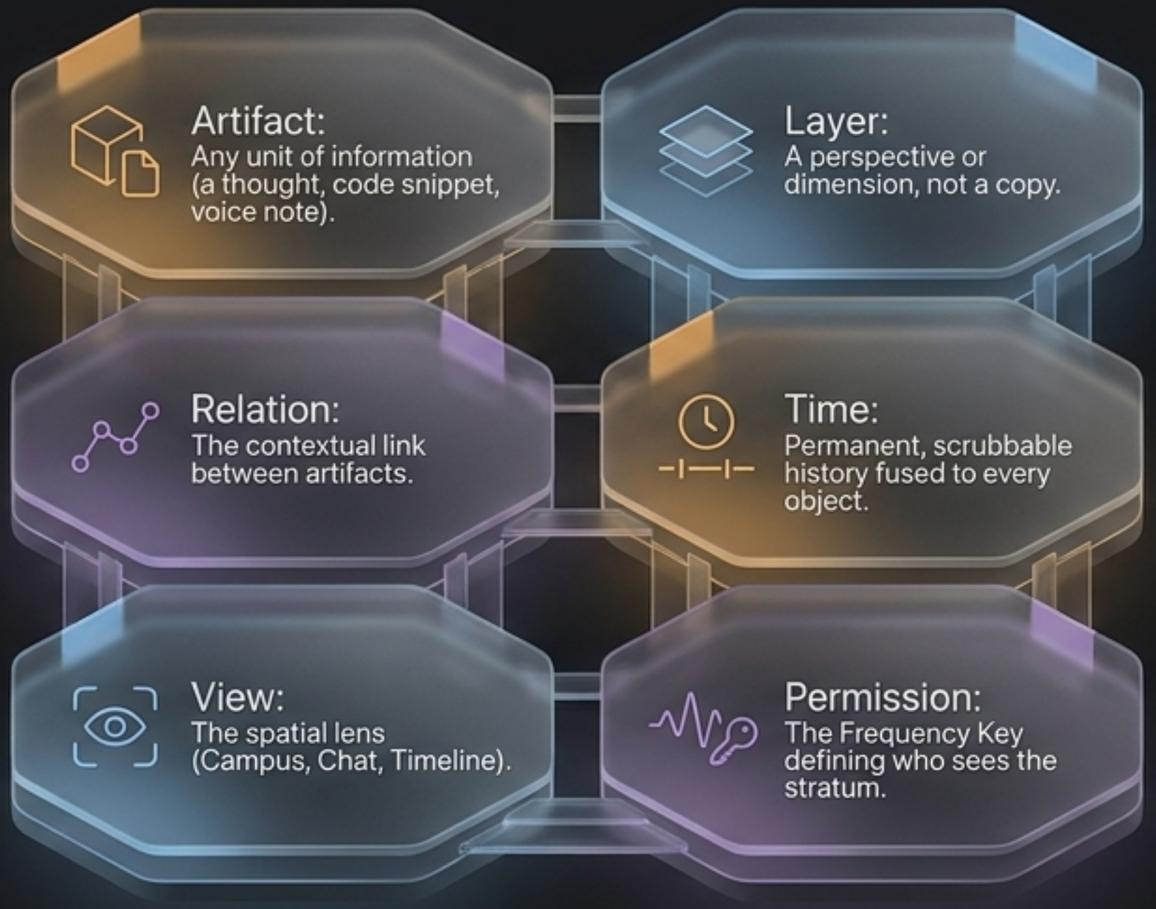

The Invisible Frequency Layer

Non-destructive:
The underlying files and code are never modified.

Untouched Base Layer
(Chat Thread)

The Six Cognitive Primitives

Layered Stack Editing: Verbs Over Nouns

Select
-> Point
-> Speak
-> Place

Raw Thought

- Extract (pulling an artifact out of a conversation)
- Reorganize (clustering related concepts together)
- Promote (moving from rough draft to structured note)
- Fork (splitting a thought into a new project direction)

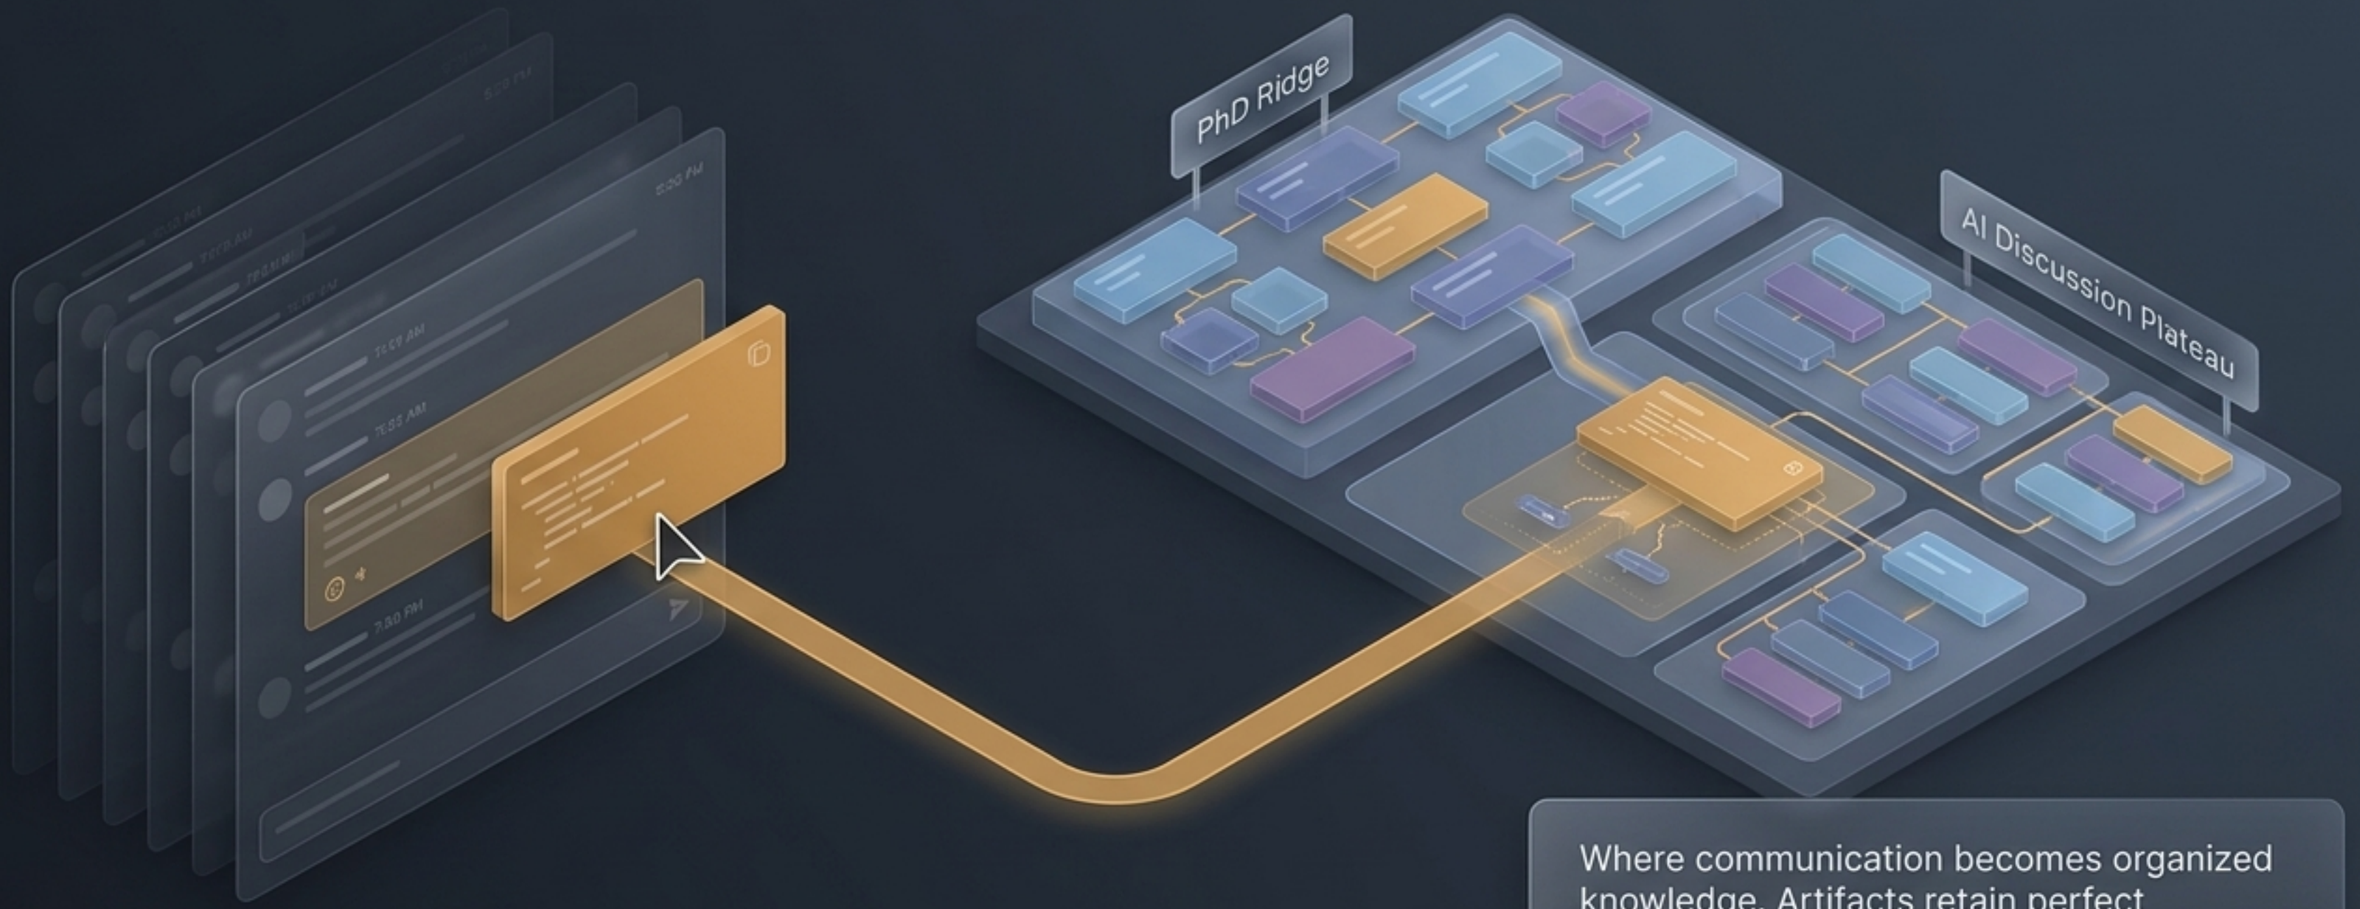

Editing is performed by moving, layering, and promoting artifacts, rather than repeatedly rewriting files.

System 1: The Communication Layer

- Live In-Place Replies
- AT-SPI Semantic Anchoring
- Cryptographic Frequency Sharing

System 2: The Cognitive Editing Layer

Where communication becomes organized knowledge. Artifacts retain perfect provenance to their source.

Two Systems, One Underlying Grammar

System 1: Communication Layer

State:	Live & Real-time
Purpose:	Conversation Management
Primary Actions:	Write in-place, strike-through, timestamp, voice playback

Metaphor:

A transparent glass sheet over a fast-moving chat.

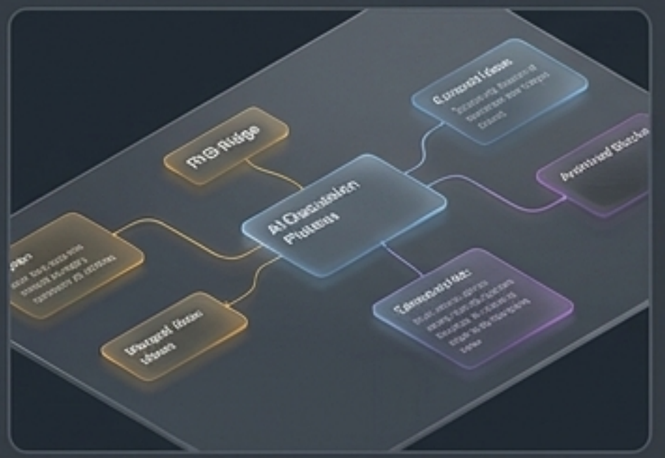

System 2: Cognitive Editing Layer

State:	Asynchronous & Persistent
Purpose:	Knowledge Construction
Primary Actions:	Extract, merge, map, promote, archive

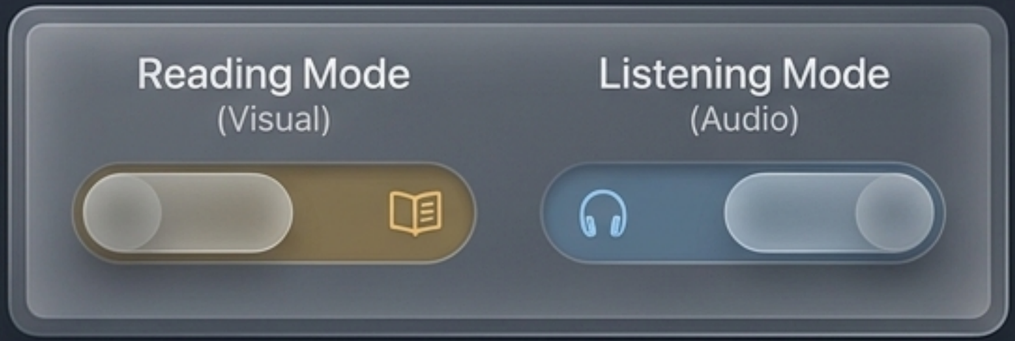

Metaphor:

A spatial whiteboard for stationary project nodes.

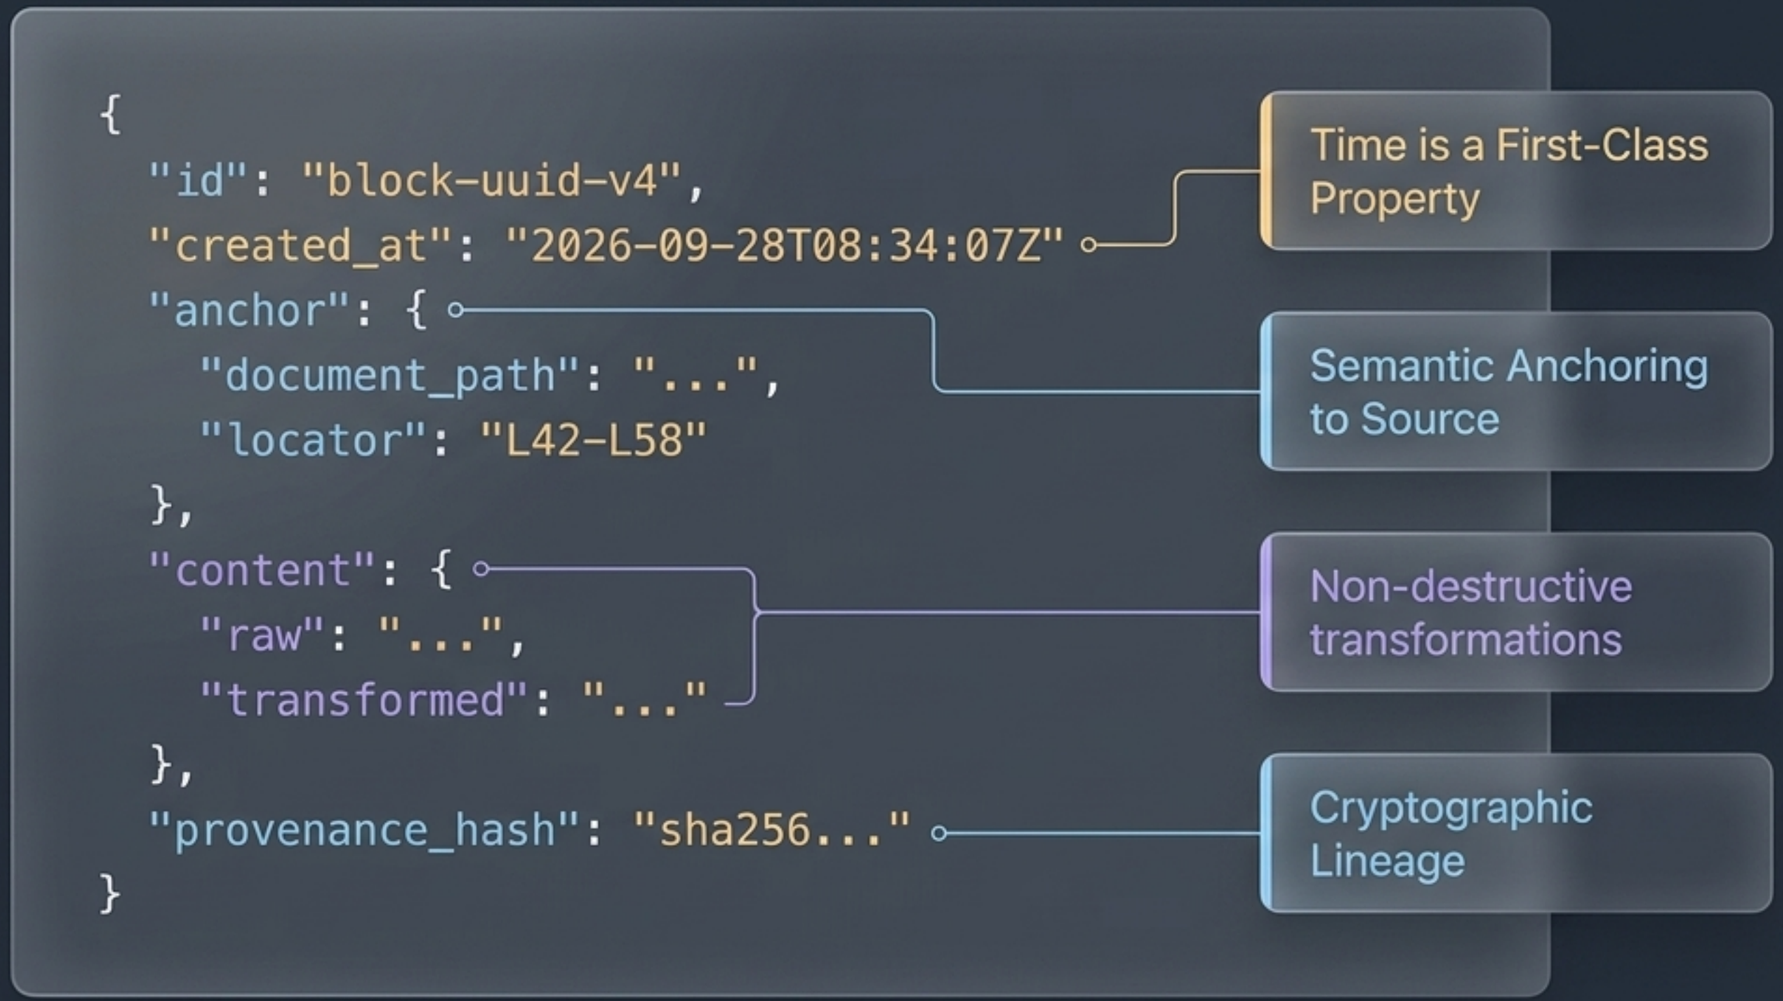

Voice as a Navigational Interface

The Universal Artifact Schema

The 3-Panel 4D Workspace (MCP-App)

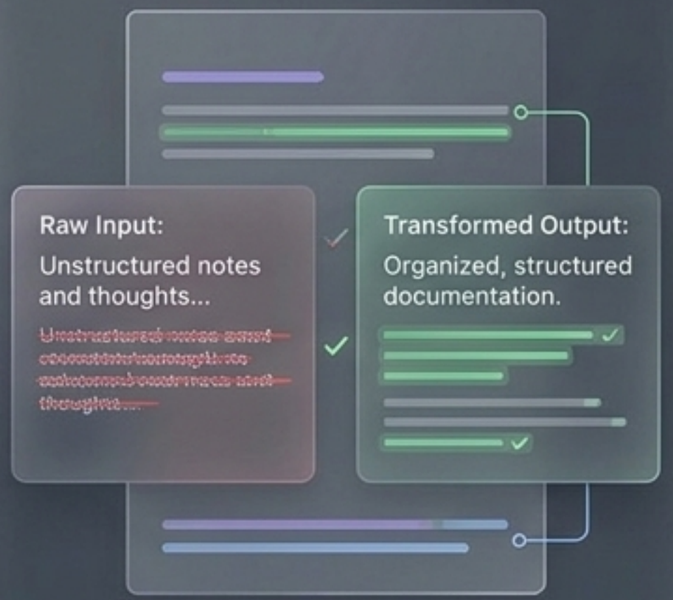

Rough Draft Sandbox

Temporal Stack Canvas

Final Production Ledger

Temporal Scrubbing: The Z-Axis of Time

Scrubbing through a recording of your own cognition. A living history of how ideas evolved, not just a log of past messages.

The Technical MVP Architecture

JSON-RPC Syncing

Horizon 3 features (Reticulum Mesh, LoRa, 5G SA) are excluded from the MVP to focus purely on the core cognitive loop.

The North Star

Knowledge is navigable space, not a collection of documents.
